65 YEARS EXPERIENCE

ABOUT US

With Over 65 Years Experience in the Fire Protection Industry

Fire Africa (Pty) Ltd is a South African-based company with an extended presence in the Democratic Republic of Congo (DRC), committed to providing advanced fire suppression solutions across Africa. Our core focus lies in innovative fire misting systems, though we also offer a full range of fire safety services and products, including tailored risk assessments, system design, and compliance support. Our team brings years of expertise and industry knowledge to every project, ensuring the highest level of protection for people, assets, and the environment.

With operations spanning South Africa, the DRC, and beyond, Fire Africa is dedicated to addressing the unique fire safety challenges faced across the African continent. We serve industries such as mining, manufacturing, energy, commercial, and more, offering solutions that comply with both local and international fire safety standards while prioritizing sustainability, efficiency, and effectiveness.

1. WHY CHOOSE US:

At Fire Africa, we specialize in the design, installation, and maintenance of fire misting systems, continuously striving to enhance and refine our technology to meet the evolving needs of fire protection. By leveraging the latest advancements in fire suppression technology, we ensure that our systems provide the highest level of safety, efficiency, and environmental sustainability. Our commitment to innovation, coupled with years of industry expertise, positions us as a trusted leader in the field, delivering tailored solutions that protect lives, assets, and environments across Africa.

2. OUR MISTING SYSTEMS:

- (LSS) Localised Suppression System
- (LSS) Containerised Equipment
- (VSS) Vehicle Suppression System
- (TSS) Tri-Fluid Spray System - In-Rack System

3. OUR IN-CABINET SYSTEM:

- Gas In-Cabinet System

1.

CONSULTING

Fire Africa (Pty) Ltd specialise in providing comprehensive services tailored to meet your needs. From meticulous risk assessments to thorough site audits, we leave no stone unturned in ensuring your premises are compliant. Our expertise extends to projects facilitation, where we guide you through every step of the process with efficiency and precision. Whether you require in-depth analysis, on-site evaluations, or seamless project management, our team is dedicated to delivering top-tier solutions that prioritize your safety and peace of mind.

2.

NEW INSTALLATION

Our expertise encompasses a wide array of fire protection installations tailored to your specific needs. We offer “Total Fire Spectrum of Services”, from sprinklers systems including tanks and pumps, total flooding systems, detection to water and foam mist installations etc. We specialize in designing and implementing cutting-edge solutions to safeguard your property. We deploy certified and highly skilled experienced installation teams, each specialized in their respective fields of expertise, ensuring precision and proficiency in every aspect of our work. Each installation is completed, commissioned, certified and handed over with all applicable documentation and related on-site

3.

SERVICING

We conduct regular maintenance services, service level agreements (SLA's) tailored to the specifications, requirements, and regulatory standards of your fire systems. Our offerings include monthly, quarterly, bi and annual servicing to uphold the integrity and functionality of your systems. Following each service, we furnish clients with professional reports and comprehensive registers detailing the maintenance performed as legislated, ensuring transparency and compliance with industry standards.

OUR SERVICES

Risk Assessment

From Meticulous risk assessments to thorough site audits, we assess the entire site to evaluate existing fire systems, associated risks, compliance to codes and standards and report accordingly.

Fire Engineering

Industry, Mines, Plant & Special Risk Fire Protection. Review existing systems and design special risk applications e.g. Transformers, Conveyors, Hydraulic Packs, Gensets etc. Professional Engineering reviews, designs, installations and sign off's (PhD Pr. Eng) - ECSA Registered.

National Building Regulations

We ensure your projects comply with all relevant building codes and fire safety standards, offering expert advice and assessments to guarantee legal compliance and safety from inception till handover.

Fire Inspection & Reporting

Our Fire Inspection & Reporting services offers thorough evaluations of fire safety systems, providing detailed reports that ensure compliance with regulations and identify areas for improvement to enhance overall safety.

Project Management

Our Fire Service Project Management ensures execution of fire safety projects from inception to completion. We oversee every aspect, including planning, coordination, and implementation, to deliver project on time, within budget, and to the highest safety standards.

Fire Compliance / Management

Fire Africa provides tailored fire safety solutions for high-risk environments, addressing unique challenges with advance technologies and expert strategies to ensure maximum protection and compliance.

Fire Fighting / First Aid Training

Our Fire Fighting and First Aid Training equips your team with essential skills to respond effectively to emergencies, providing hands-on instruction in fire suppression and life-saving first aid techniques to ensure workplace safety.

Emergency Planning

Our emergency Plans service develops clear, effective strategies for safe and orderly procedures and evacuations during emergencies, tailored to your facility's layout and specific needs, ensuring everyone knows how to respond during and emergency.

FIRE AFRICA OUR SOLUTIONS

Fire Africa's Localised Suppression System (LSS) is specifically designed to safeguard critical production and industrial equipment, including transformers, generators hydraulic power packs, conveyor belts (particularly high-risk areas such as tail, head, and tensioner pulleys), and fuel storage tanks, against the threat of fire.

Fire Africa provides misting systems for all types of containerized equipment, with the selection of the system tailored to the specific fire risk classification. In addition, we offer gas suppression systems for electrical equipment or cabinets. Depending on the level of openness, we provide a range of solutions, including total flooding systems and in-cabinet suppression systems, ensuring optimal safety, reliability, and compliance with industry standards.

Fire Africa's Vehicle Suppression System (VSS) is engineered to protect high value mining vehicles, including charge cars, trucks, and tippers, operating in hazardous and demanding environments. One of the most significant risks to both personnel and machinery is the threat of fire. In addition to protecting vehicles, the installation of a water mist system in the cabin is recommended to safeguard human life in the event of a fire, offering enhanced protection for operators and crew.

Fire Africa offers the Tri-fluid Spray System (TSS) as a key component of our fire misting solutions, in close partnership with Fire Design House, the patented owner of the TSS, to deliver this advanced technology to our clients. TSS is engineered as a compact, high-efficiency alternative to traditional sprinkler systems, providing early detection, rapid activation, and precise suppression, while utilizing 95% less water than conventional methods. The TSS In-Rack System, which is Agrément Certified, is trusted by leading warehouses for its superior safety, efficiency, and reliability in fire protection.

Specifically for high-hazard storage environments. Positioned directly within the racking structure, the TSS In-Rack System delivers rapid and highly targeted suppression by utilizing a combination of water, foam concentrate, and compressed air. This tri-fluid mixture creates a high-expansion foam that quickly blankets and cools the fire, effectively minimizing damage and preventing re-ignition. Ideal for warehouses storing flammable or combustible materials, the TSS system ensures superior coverage and performance, enhancing overall safety and compliance with fire protection standards.
